There are some basic tools that a scientist should have at his/her disposal without having to consult a reference. This list consists of relationships that will serve you well to know. Commit these all to memory! Items 1 - 8 you should have seen in high school mathematics at some point. Items 9 and 10, the Constants, and the Formulae we will encounter this semester - make sure you commit them to memory after they are introduced in a reading assignment.

1.
$$a x^2 + b x + c = 0$$
 \implies $x = \frac{1}{2a} \left[-b \pm \sqrt{b^2 - 4ac} \right]$
2. For right triangles: $\sin A = y/r$
 $\tan A = y/x$
 $x^2 + y^2 = r^2$
3. $\sin (A \pm B) = \sin A \cos B \pm \cos A \sin B$
 $\cos (A \pm B) = \cos A \cos B \pm \sin A \sin B$
4. Law of Cosines: $a^2 = b^2 + c^2 - 2bc \cos A$
Law of Sines: $\frac{\sin A}{a} = \frac{\sin B}{b} = \frac{\sin C}{c}$
5. Circle: $C = \text{circumference} = 2\pi r$ $A \odot = \text{Area} = \pi r^2$
6. Cylinder: $A = \text{surface area} = 2\pi r L + 2\pi r^2$ $V = \text{volume} = \pi r^2 L$
7. Sphere: $A = \text{surface area} = 4\pi r^2$ $V = \text{volume} = 4/3\pi r^3$
8. $\sin^2 A + \cos^2 A = 1$
9. $|\vec{a} \times \vec{b}| = ab \sin \theta$; $\vec{a} \times \vec{b} = \hat{1} (a_y b_x - b_y a_z) + \hat{j} (a_z b_x - b_z a_x) + \hat{k} (a_x b_y - b_x a_y)$
10. $\vec{a} \cdot \vec{b} = a_x b_x + a_y b_y + a_z b_z = ab \cos \theta$
Physical Constants: [Memorize as we encounter these in class.]
 $g = 9.8 \text{ m/s}^2$ $G = 6.67 \times 10^{-11} \text{ N m}^2/\text{kg}^2$ $c = 3.00 \times 10^8 \text{ m/s}$
Physical Formulae: [Memorize as we encounter these in class.]
 $\vec{v} = \frac{d\vec{r}}{dt}$ $\vec{a} = \frac{d\vec{v}}{dt}$ $\vec{F}_{NET} = m\vec{a} = \frac{d\vec{p}}{dt}$ $W = \int \vec{F} \cdot d\vec{x}$ $U_g = mgy$ $a_c = \frac{v^2}{r}$
 $F_g = mg$ $\vec{F}_{GRAV} = \frac{GmM}{r^2} \hat{r}$ $F_s \le \mu_s N$ $F_{spring} = -kx$ $K = \frac{1}{2}mv^2$

$$\vec{p} = m\vec{v}$$
 $\vec{\tau} = \vec{r} \times \vec{F}$ $\vec{v} = \vec{\omega} \times \vec{r}$ $\vec{l} = \vec{r} \times \vec{p}$ $f = \frac{1}{T} \omega = \frac{2\pi}{T}$

<u>Text Appendix A:</u> <u>Derivatives</u>: Know them all! <u>Integrals</u>: Know the first five in the first column and the 3^{rd} , 5^{th} , and 6^{th} in the second column [integrals of e^{ax} , sin(ax), and cos(ax)]
