

NASC209 Physical Geology

Date 1-29-20

Sample tray number 5

Original Investigator's name Kayla Maynard

Description of sample:

Smooth, circular

Speculate (hypothesize!) on how the sample may have been formed or acquired its present appearance.

I think it got its current appearance of being really smooth by being on a water's edge + having water run over it + erode the rough edges so the water would pass better.

Pair partner's name Carma Daves

Description modifications w/ pair partner:

dark grey in color, sedimentary
river worn, palm sized

Formation speculation modifications w/ pair partner:

~~Sed~~ sedimentary
