

NASC209 Physical Geology

Date 1-29-20

Sample tray number 9

Original Investigator's name Devon Rooney

Description of sample: Multicolored, Semi-crystalline,
Has some holes in it.

Speculate (hypothesize!) on how the sample may have been formed or acquired its present appearance. This sample may have been formed under large pressure. Part of this rock I believe was also created at an extremely hot temperature.

Pair partner's name Brian

Description modifications w/ pair partner:

Remnants of air pockets, Semi-crystalline

Formation speculation modifications w/ pair partner:

Formed quickly and in higher temperature,
as air pocket remnants are present,
