

# NASC209 Physical Geology

Date 01/29/20

Sample tray number 14

Original Investigator's name Mark Shelby

Description of sample:

- smooth
- mostly pink
- some spots of blue/gray
- divits in bottom

Speculate (hypothesize!) on how the sample may have been formed or acquired its present appearance.

- different rock forms smashed together to get the different colors
- running water maybe? to make it smooth

Pair partner's name Maria Dalman

Description modifications w/ pair partner:

looks like 2 types of sediment fused together  
mainly the pink, blue flecks/rings

Formation speculation modifications w/ pair partner:

Water ✓
