

NASC209 Physical Geology

Date 01 29 20

Sample tray number 19

Original Investigator's name Dinah Gilbert

Description of sample: → soft

Chalky like material, white w/ gray/darker patches. Layered, reef like rock, many small gaps and spaces between layers

Speculate (hypothesize!) on how the sample may have been formed or acquired its present appearance.

Deeper layer in core, possibly in water to create the spaces

Pair partner's name Morgan Monnin

Description modifications w/ pair partner:

added to description:

coarse texture, flacky when rubbed

Formation speculation modifications w/ pair partner:

pressure formed
