

NASC209 Physical Geology

Date 1/29/20

Sample tray number 23

Original Investigator's name Leila Ray

Description of sample:

- I think it's a geode
- Has a crystal-like part in the inside with a hard exterior
- Salty feel to the touch on the outside

Speculate (hypothesize!) on how the sample may have been formed or acquired its present appearance.

I think it was formed originally by some sort of heat, and then broken open much later.

Pair partner's name Reid

Description modifications w/ pair partner:

crystallized

Formation speculation modifications w/ pair partner:

minerals over time ~~and~~ crystallize
